

ARNOLD[®]
BlueFastening Systems

Cleancon[®]

More safety due to ultra-fine cleaning

The market's demands

- + Bearings and non-friction surfaces jam
- + Process reliability
- + Blocked valves
- + Reduction in size
- + Clogged nozzles and filters
- + Avoid system failures
- + Short circuit in conducting tracks
- + Increasing productivity

ARNOLD provides the solution

Cleancon[®]
More safety due to
ultra-fine cleaning

Cleancon®

Number of metallic particles

In conventional manufacturing the number of metallic contaminating particles 100–200 μm and 200–400 μm in size is much higher (shown in grey) than with Cleancon's® ultra-fine cleaning processes (shown in blue).

Technical advantages of Cleancon®

- + High level of cleanliness with the ultra-fine cleaning process
- + Fitted components very reliable in operation
- + Defined cleanliness with analysis technology
- + Fewer system failures
- + Prevents relative movement during shipment
- + High assembly reliability

Cleancon®

Step by step to perfect cleanliness

↓ UPSTREAM PROCESS

1. Requirements profile

- + Limiting values defined
- + Ambient factors considered
- + Surface specified
- + Test specifications
- + Packaging requirements

2. Production

- + Cleaning processes during manufacture

3. Demagnetization

- + Higher degree of cleanliness
- + Preventing metallic particles from sticking
- + Improving the feed process

↓ MAIN PROCESS

4. Clean room

- + Ultra-fine cleaning
- + Low-friction coating (optional)
- + Packing

5. Cleanliness analysis to VDA 19.1 standard

- + Adapted extraction procedure
- + Analyse of
 - Particle size
 - Gravimetry

6. 'Clean' packaging

- + Position-holding, anti-static inner packaging
- + Customisable outer packaging

Commercial advantages of Cleancon®

- + Avoids system failures
- + Reduces quality costs
- + Opportunity to reduce size
