## Requalification

Dear Customer,

According to IATF 16949 the requalification of customer drawing features, material and function is required. In order to be able to meet this requirement in practice with over 6,000 living products, we put our products together into product groups. Requalification is carried out on a representative basis for each product group.

When carrying out a part-specific requalification, the cost issue must be taken into account. As stated in our offers requalification is not part of the offer and the effort for a part-specific requalification must be invoiced separately. Your responsible sales representative can provide you with more information about the amount. Please let us have a separate order if you need part-specific requalification.

What we can send you free of charge is an updated cover sheet (PPAP or VDA), a printout of the SPC protocol and a copy of the material and coating certificate.

We are convinced that you can understand our way of handling the requalification requirements. Should you have any questions or want to discuss the subject further, please feel free to contact us.

Best regards.
